Travail a faire 2

question 1

Non le niveau 1 de sécurité ne permet pas d'éviter la brèche d'information

question 2

oui le niveau 5 de sécurité permet d'éviter la brèche d'information

question 3

Le mécanisme de sécurité dans le code source limite l'accès à la page via des contrôles d'authentification et d'autorisation. Seuls les utilisateurs ayant les droits appropriés peuvent y accéder. Les autres sont redirigés ou bloqués. Donc, tous les utilisateurs non autorisés n'ont pas accès à cette page.

question 4

Pour empêcher tout utilisateur, y compris l'administrateur, d'accéder à une page spécifique par le Web via la configuration du fichier php.ini, vous pouvez définir une restriction avec la directive open_basedir. Par exemple, en ajoutant la ligne suivante dans le fichier php.ini : open_basedir = /var/www/html:/tmp:/etc/php/7.0/apache2/, vous limitez l'accès des scripts PHP aux répertoires spécifiés, empêchant ainsi l'exécution des fichiers PHP dans d'autres répertoires accessibles par le Web. Il est également conseillé de déplacer la page en question hors de la racine du serveur Web pour renforcer la sécurité.

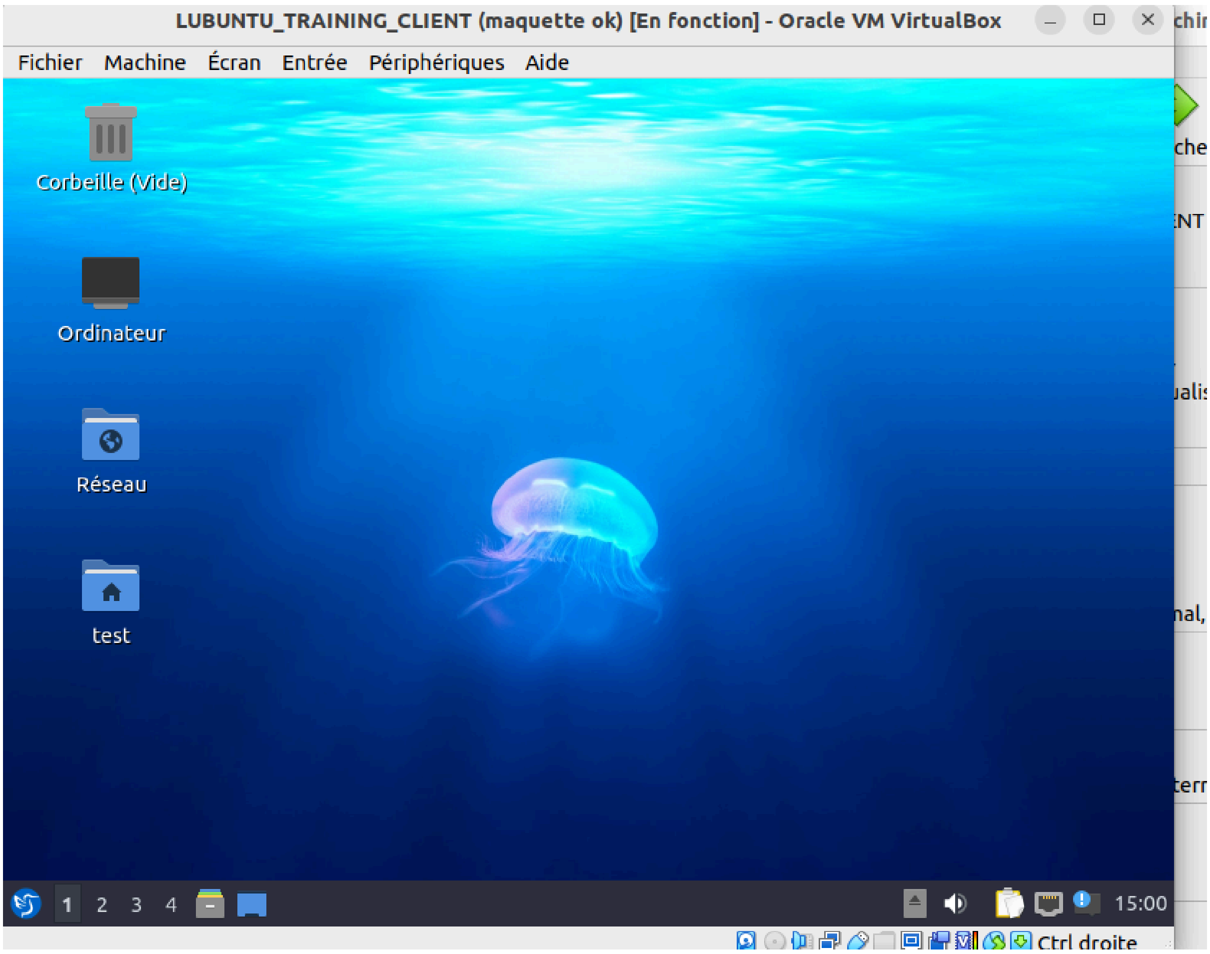
question 2

```
root@www:~# a2enmod ssl
Considering dependency setenvif for ssl:
Module setenvif already enabled
Considering dependency mime for ssl:
Module mime already enabled
Considering dependency socache_shmcb for ssl:
Enabling module socache_shmcb.
Enabling module ssl.
See /usr/share/doc/apache2/README.Debian.gz on how to configure SSL and create self-signed cer
tes.
To activate the new configuration, you need to run:
  systemctl restart apache2
root@www:~# a2ensite default-ssl.conf
Enabling site default-ssl.
To activate the new configuration, you need to run:
  systemctl reload apache2
root@www:~# service apache2 restart
root@www:~#
```



```
[sudo] password for test:
┌──(root㉿kali2025)-[/home/test]
└─# apt install dsniff sslstrip
dsniff is already the newest version (2.4b1+debian-33).
Installing:
  sslstrip
